V1.0.0

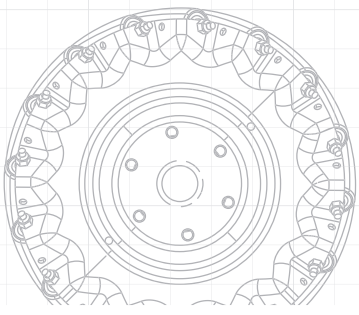

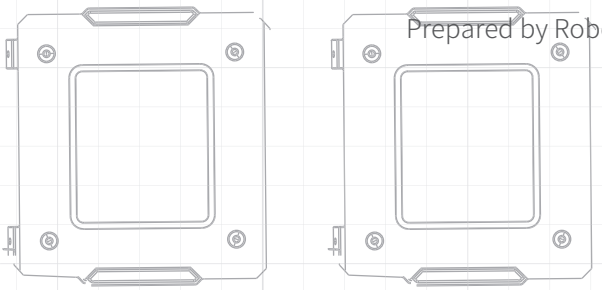

The 26th China University Robot Competition

ROBOMASTER 2027 University Championship

Participant Manual

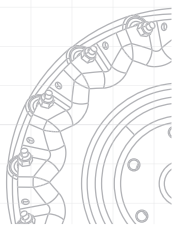

Prepared by RoboMaster Organizing Committee

Released in October, 2026

Statement

Participants are forbidden from engaging or participating in any actions determined by the RoboMaster Organizing Committee (hereinafter referred to as “the RMOC”) as involving public disputes or sensitive issues or causing offence to the public or certain social groups, or damaging the image of RoboMaster; otherwise, RMOC shall have the right to disqualify offending persons permanently from the competition.

1 Foreword

The RoboMaster University Series (RMU), initiated by DJI, is a competition under the National College Students Robotics Competition. It serves as a robotics competition and academic exchange platform designed for tech enthusiasts worldwide. Since its inception in 2013, RMU has consistently upheld the philosophy of “bestowing honor upon youth, empowering thought, and supporting young engineers around the globe to become dreamers who pursue excellence with practical determination.” The series is dedicated to cultivating and attracting well-rounded talents with strong engineering mindsets, while widely sharing the beauty of technology and the spirit of innovation with the public.

The RoboMaster University Championship (RMUC), part of the National College Students Robotics Competition, focuses on assessing participants' comprehensive application of science and engineering disciplines and their practical engineering skills. It integrates a wide range of robotics-related technologies, including mechanical engineering, embedded systems design, control algorithms, electrical engineering, integrated communication and perception, autonomous navigation, and human-machine interaction. Innovatively combining popular presentation formats with robotic competition, RMUC delivers more vivid and intense robot battles, attracting extensive attention from tech enthusiasts and the general public alike.

2 Participation

2.1 Registration Requirements

You are eligible for registration if you meet any of the following criteria:

- Participating teams that successfully pass the RMUC 2025 Mid-Term Progress Assessment or rank within the top 104 in the RMUC 2026 Final Robot Assessment (entering the Video Assessment stage).
- Participating teams that successfully advanced from Group Stage of the 3V3 Match in RMUL 2026; for Tier-2 Teams, the condition may be relaxed to winning a second prize in the main awards.

- To form a joint team, at least one of the participating teams must meet the RMUC eligibility requirements for registration.
- The RMUC registration requirements will be adjusted each season based on actual circumstances and will be finalized when registration opens for that season.

2.2 Participating Teams

- Due to legal and regulatory restrictions in overseas regions and countries, overseas teams are currently unable to create a team or complete registration on the official RoboMaster platform. Overseas team creation, registration, subsequent technical assessment sections, and roster collection will all be conducted via Wenjuanxing. Overseas team registration portal: https://djistore.wjx.cn/vm/Q4bFVhT.aspx
- The distinction in naming teams from Mainland China, Hong Kong, Macao, Taiwan, and overseas Teams is provided solely to clarify instances where different participation procedures apply due to the geographic location of the university.

Teams must adhere to the following rules:

R1 All participating teams must be created on the RoboMaster forum by the team's Head Supervisor or Captain. If a team already exists, there is no need to create it again. When creating a team, you need to provide all required team information as specified by the platform. To obtain the invitation code, please contact the RoboMaster Event Staff. After preparing the team, the team leader can invite team members to join via an invitation link. In the team space, click Registration for the competition to enter the competition registration module. Select the event you wish to register for, click Register Now, and follow the instructions to complete the Registration submission process. If

 © 2026 DJI All Rights Reserved.

all the requirements in this section are met, the registration will be successful. The RMOC will periodically open the Entry List adjustment function during the season, allowing participating teams to change their team members during the open period. All information is based on the final Entry List confirmed during the current open period. No changes can be made after the period has ended. The Registration Center will be open for one last time before the competition starts. The RMOC will follow the final information submitted in preparing and giving out award certificates.

R2 Any team participating in different competitions must use the same team name. A team's name must be in the format of "XXX Team", where "XXX" is the team's self-chosen name. The total length of the team name should not exceed 16 English letters or 8 Chinese characters. The team name must not include the university or college name or its abbreviation in Chinese/English, or such Chinese characters as "队", "团队", and "战队" which mean "team" in English, or other special symbols such as "*/-+". The team name must reflect the positive and pioneering spirit of the team and comply with relevant state laws and regulations. If the RMOC determines that a team's name does not align with the spirit of the competition, it has the right to require the team to change its name.

After submitting their registration materials, participating teams are not allowed to change their team names.

R3 A participating team must be affiliated with a higher education institution, and must meet the requirements for personnel roles, team size, and qualifications as specified in "2.3 Participants".

R4 In principle, each college or university is only allowed to have one qualified team for one competition (challenge). Some institutions have multiple campuses in different cities, making it difficult for inter-campus students to compete as a team. Such institutions are allowed to form more than one campus-based teams once the situation has been verified by the RMOC. If a school has more than one participating team submitting a registration, please refer to the "List of Representative Teams for RoboMaster 2027 University Series" for the detailed Registration review guidelines. The applicant must ensure that their registration information is complete and accurate, and that they will undertake the corresponding responsibilities. The applicant must bear all consequences caused by any missing or inaccurate information. For special circumstances, the applicant may contact the RMOC, which will handle the case based on actual circumstances. The RMOC reserves the right of final interpretation.

The RMOC will reject the registration of any team that does not meet any of R1-R4. The participating team can reapply until it meets the requirements.

© 2026 DJI All Rights Reserved

R5 Any two schools that do not have their own individual teams can form an intercollegiate team.

A. Before establishing an intercollegiate team, members must consider all their respective circumstances and communicate with each other thoroughly about team planning. Any operating and R&D costs, personnel arrangements or disputes arising therefrom must be handled by the intercollegiate team itself, for which the RMOC bears no responsibility.

B. Intercollegiate teams are not allowed to be split after they're officially established. They can only participate in the RMUC 2026 as intercollegiate teams. If an intercollegiate team that has passed registration review is split up, it will be considered as voluntarily forfeiting participation eligibility.

C. The intercollegiate team's name should be "XXX Intercollegiate Team" instead of "XXX Team." An intercollegiate team is required to upload an Intercollegiate Team Statement issued by its college or university to the registration system. The Intercollegiate Team Statement template can be found in the Registration system section instruction.

R6 In this season, each participant can only join one team for the competition.

R7 If any two or more teams do not meet any requirement under the "Five Differences" Rule, they will be treated as the same team.

"Five Differences" Rule: different team names, different team members, different supervisors, different affiliated institutions (college or other educational institutions), and different robots.

R8 Provided the relevant registration requirements are met, one team can sign up for more than one RoboMaster competition (including RMUC and RMUL).

R9 The RMOC will deem a team participating in different competitions in the same season as one and the same group to handle the various competition processes more efficiently (including free material supply, material purchases, and support for participants). A team cannot be broken up after completing registration for the season.

2.3 Participants

The RoboMaster Competitions advocate teamwork and cooperation. To encourage participants to actively take on key roles within the Team, the RoboMaster Organizing Committee will select awards such as Outstanding Team Advisor and Outstanding Supervisor to recognize Participants who have made significant contributions to the RoboMaster competition. For more details, please refer to "5.7 Outstanding Contribution Award".

 © 2026 DJI All Rights Reserved.

The roles and responsibilities of participants are as follows:

- Participants are not permitted to hold multiple positions concurrently.
- All participants must meet the corresponding eligibility requirements and, if necessary, present relevant proof at the competition venue.
- Regarding eligibility for awards: Team Advisors and reserve members are not eligible for awards and may only receive the electronic certificate of participation issued by the RMOC for the current season.

Table 2-1 Roles and Responsibilities of Participants

Position	Position Description	Responsibilities	Identity	Number of Personnel
Supervisor	The team's supervisor	• Responsible for team formation, management, and major decision-making. • Responsible for building team culture and fostering positive values among team members. • Responsible for the team's legacy building and development. • Guide the team in building their robots. • Coordinate on-campus resources, guide the team in	Faculty personnel who will graduate before March 2027 and have research or teaching qualifications at the university from September 2026 to August 2027	0-7
Head Supervisor	• The head of supervisors • The main liaison with the RMOC			1

including but not limited to: standby captain, technical leader, robot lead, and quality manager.

Table 2-3 Concurrently Held Positions

Position	Position Instruction	Responsibilities	Quantity
Standby Captain	The individual selected as the next Captain, already confirmed and announced within the team.	● Gradually get familiar with the team's management processes to prepare for taking the role of Captain next season. ● Engage in the core competition processes and team management at the event.	When submitting the roster for the Regional Competition, the team must designate 1 regular member as the candidate vice captain
Technical Leader	Lead for a single technical area (including mechanics, algorithms, embedded systems, control, hardware, and software)	● Manage personnel and other resources in the specific technical area, as well as design training schemes for new team members. ● Support Robot Team Leads in assigning personnel specializing in the technical area to different robot teams, through the lens of technical expertise.	0 or 1 lead per technical area
Robot Leader	Leader for a single robot type, such as Heavy Engineer, Infantry, Sentry, Drone System, Radar System, or Dart System	● Design the underlying architecture for the corresponding robot type and make decisions on key technical directions. ● Help Technical Leads manage the resources that can be allocated to the corresponding robot type from the perspective of the robot team.	1 lead per robot type
Quality Manager	● Person in charge of quality assurance during	● Design robot test processes, test cases, and test methods, and organize functional, stability, life, and other tests at each stage of the development	1-2

© 2026 DJI All Rights Reserved

Position	Position Instruction	Responsibilities	Quantity
	robot development ● Establish and maintain a quality management system	process to ensure the stability of robots' preset functions ● Engage in test method improvement and test tool development to improve test efficiency and quality	

2.4 Personnel Category

When submitting the list in the registration system, the Captain must select the directions of all Regular Members and Reserve Members, categorized as follows:

Table 2-4 Direction Classification

Direction	Instruction	Relevant Majors
Mechanical	Conduct robot structure design, assembly, and maintenance; responsible for the design costs and reliability of the robot structure.	Theoretical and Applied Mechanics; Engineering Mechanics; Mechanical Engineering; Mechanical Design, Manufacturing, and Automation; Mechatronics Engineering.
Embedded System	Responsible for firmware development, OS deployment, and communication protocol configuration; accountable for the reliability of hardware-level interactions between microcontrollers, sensors, and actuators, as well as overall system stability.	Electronic Information Engineering; Communication Engineering; Internet of Things Engineering; Automation; Computer Science and Technology; Measurement & Control Technology and Instrumentation; Electrical Engineering and Automation, etc.
Control System	Responsible for robot kinematic modeling as well as the design and implementation of	Automation; Electrical Engineering and Intelligent

 © 2026 DJI All Rights Reserved.

Direction	Instruction	Relevant Majors
	control strategies. Accountable for the output precision of motion commands, as well as the overall response speed and stability of robot movement.	Control; Intelligent Equipment and Systems; Robotics Engineering; Mechatronic Engineering; Electronic Information Engineering; Communication Engineering, etc.
Algorithm	Design and develop robot vision and navigation systems, as well as planning and decision-making algorithms; select and debug robot computing platforms; take responsibility for the design costs and reliability of components related to the robot computing platform and host computer algorithms.	Automation; Artificial Intelligence; Robotics Engineering; Computer Science and Technology; Software Engineering; Electronic and Computer Engineering
Hardware	Select, design, and develop robot hardware platform (including but not limited to supercapacitors, control boards, motor ESCs); take responsibility for the design costs and reliability of the robot hardware platform.	Electronic Information Engineering; Electronic Science and Technology; Microelectronics Science and Engineering; Integrated Circuit Design and Integrated Systems
Software	Carry out development of custom client for competition robots, control software, various debug tools, as well as other application software that contribute to team building and development, such as member management system development and simulator development.	Computer Science and Technology; Software Engineering; Data Science and Big Data Technology; Network Engineering; Electronic Information Engineering, etc.
Operations	The operations track is further divided into: communications, business development, logistics, and finance.	/

3 Season Schedule

The following season schedule is for reference only. The specific time is subject to the latest announcement by the RMOC.

The RMUC 2027 consists of two schedules: the Online Schedule and the On-Site Schedule. The RMOC recommends that each team formulates a preparation plan and a robot production budget and plan before the competition to estimate the manpower and funds needed and avoid wasting such resources.

Participating teams must complete registration, and only after finishing and passing the corresponding Technical Assessment before the deadline will they be eligible for participation and receive the corresponding RoboMaster product Educational Discount (hereinafter referred to as “product discount”) provided by the RMOC.

- For the Technical Assessment guidelines, please refer to “4 Technical Assessment”.
- For details on the product discounts corresponding to each Technical Assessment section, please refer to the “RMU 2027 Instructions for Purchasing Materials”.

Table 3-1 Online Schedule

Schedule	Section	Instruction
October 20, 2026, 15:00 - October 27, 2026, 15:00	Registration	Log in to the RoboMaster forum and complete the registration as required.
November 18, 2026, 15:00 – November 19, 2026, 15:00	Technical Assessment: Season Planning	• Eligible to the product discounts corresponding to the section. • Obtain submission permissions for the Rule Exam
December 16, 2026, 15:00– December 17, 2026, 15:00	Technical Assessment: Rule Exam	• Eligible to the product discounts corresponding to the section. • Obtain permissions to submit the Mid-Term Progress Documentation

© 2026 DJI All Rights Reserved

Schedule	Section	Instruction
January 6, 2027, 15:00 – January 7, 2027, 15:00	Technical Assessment: Mid-term Progress Documentation	● Eligible to borrowing a Heavy Engineer Referee System, an Infantry Referee System, and a Sentry Referee System ● Eligible to the Referee System Assessment Teams participating in the RMUL 2027 3V3 Match and those that have passed this section are allowed to claim no more than one set of Referee System for each robot type.
March 1, 2027, 15:00 – March 4, 2027, 15:00	Technical Assessment: Referee System Assessment	● Eligible to borrowing a full set of Referee Systems. ● Obtain eligibility to participate in on-site competitions, and gain permission to submit competition feedback
March 1, 2027, 15:00 – March 3, 2027, 15:00	Technical Assessment: Final Robot Assessment, documentation section	
March 8, 2027, 15:00 – March 10, 2027, 15:00	Technical Assessment: Final Robot Assessment, video section	
April 9, 2027, 15:00 – April 13, 2027, 15:00	Competition Feedback	The participating teams first choose their preferred division. The RMOC will then determine the final list of participating teams for each division based on the region in which the team's college or university is located and their ranking on the Score and Rank Chart.

 © 2026 DJI All Rights Reserved.

Schedule	Section	Instruction
June 2027	Technical Assessment: Regional Season Summary	Eligible for Regional Competition prize distribution
August 2027	Technical Assessment: Final Season Summary	Eligible for Finals prize distribution

Table 3-2 On-site Schedule

Schedule	Project
May – June 2027	Regional Competition (Mainland China)
July – August 2027	National Finals

4 Technical Assessment

The purpose of the Technical Assessment is for the teams to demonstrate their technical skills and guide them in their plans and preparations as well as development based on previous experience. It also offers an opportunity for team members to polish their skills, including requirements analysis, budgeting, data analysis and report drafting. All teams must complete the Technical Assessment in accordance with the requirements of the RMOC and within the time specified.

RMUC 2027 mainly features six Technical Assessment sections: Season Planning, Rule Exam, Mid-Term Progress Documentation, Referee System Assessment, Final Robot Assessment, and Season Summary. The latest tasks and requirements for each section of the Technical Assessment are subject to forum announcements. For the schedule of each section, please refer to "3 Season Schedule".

Below are the specifications for the video and other files to be submitted for the Technical Assessment:

Participating teams must attach forms and videos as attachments to the forum reports for each section.

Table 4-1 Submission Specifications

Document Type	Specifications
Table/Form	● Format: Excel ● Font: Source Han Serif-Regular (Chinese) or OpenSans-Regular (English) ● Table format: Enable text wrapping, and automatically adjust row height and column width ● Alignment: Vertically center all text, and keep it horizontally left-aligned or centered, unless otherwise specially requested
Video	● Resolution: higher than 720p ● Upload method: Upload the video as a report attachment ● Content: ➢ Subtitles or commentaries should be included to explain each process in the video. ➢ Only relevant content should be shown, with the video well-paced and its duration not exceeding the set limit.

 © 2026 DJI All Rights Reserved.

4.1 Season Planning

Number of submissions: 1

Passing criteria: Achieve a Level of “C” or above

Content to be submitted and requirements:

- Season Plan: RoboMaster forum report text, without word limit (be concise)
- Progress Report: Excel document
- Budget Report: Excel document

4.2 Rules Exam

Rule Exam content includes: “RoboMaster 2026 RoboMaster University Series Robot Specification Manual,” “RoboMaster 2026 RoboMaster University Championship Rule Manual,” and other relevant competition terms.

4.3 Mid-term Progress Documentation

Number of submissions: 1

Passing criteria:

The project documents are rated C or above.

Content to be submitted and requirements:

- Progress Report (updated): Excel document
- Project analysis: RoboMaster forum report text

4.4 Referee System Assessment

The Referee System Assessment mainly covers the following content: “RoboMaster 2026 RoboMaster University Series Robot Specification Manual,” “RoboMaster Referee System User Manual,” Referee System FAQ, manuals for each Referee System Onboard Module, and other related materials regarding mounting specifications, usage, and common troubleshooting for the Referee System Onboard Modules. The Referee System Assessment is conducted through random selection. If all randomly selected team members pass the evaluation, the team will be considered to have passed this section.

4.5 Final Robot Assessment

Chance for submission: 1

© 2026 DJI All Rights Reserved

Passing criteria: Among teams whose project documentation and technical plan are rated “C” or above, those will be ranked by their scores in the Final Robot Assessment, and the top 96 teams will qualify.

Content to be submitted and requirements:

- Final Robot Presentation: Video
- Technical Proposal: RoboMaster forum report text
- Project documents:
  - Cost Report: RoboMaster forum report text
  - Expenditure Record: Excel document
  - Project Analysis: RoboMaster forum report text
  - Robot BOM Record: Excel document

4.6 Season Summary

Number of submissions: 1

Passing criteria: Achieve a Level of “C” or above

Content to be submitted and requirements:

Season Summary: RoboMaster Forum Report Text

 © 2026 DJI All Rights Reserved.

5 Awards

This chapter sets out the awards structure for the RMUC 2027.

- The award arrangements are subject to the latest Participant Manual or official website announcement. The names of the awards may differ from those on the actual certificates issued.

- Teams that fail to complete the check-in process after qualifying for the competition will forfeit their eligibility for awards by default.
- If a team completes the check-in process but fails to participate in its matches, the unplayed matches will be recorded as forfeits. If all scheduled matches are recorded as forfeits, the team will be ineligible for awards.

5.1 Regional Competition

The Regional Competition Awards are as follows:

Table 5-1 Regional Competiton Awards

Awards	Rank	Quantity	Reward
Regional First Prize	Regional Champion: 1st place in the region	1 per region	● Champion trophy ● Regional first prize certificate ● Cash prize of RMB 30,000 (pre-tax)
	Regional Second Place: 2nd place in the region	1 per region	● Second Place trophy ● Regional first prize certificate ● Cash prize of RMB 30,000 (pre-tax)
	Regional Third Place: 3rd place in the region	1 per region	● Third Place trophy ● Regional first prize certificate ● Cash prize of RMB 30,000 (pre-tax)
	Regional Fourth Place: 4th place in the region	1 per region	● Fourth Place trophy ● Regional first prize certificate ● Cash prize of RMB 30,000 (pre-tax)

© 2026 DJI All Rights Reserved

Awards	Rank	Quantity	Reward
	Regional Fifth – Eighth Places	4 per region	• Regional first prize certificate • Cash prize of RMB 15,000 (pre-tax)
	Regional Ninth – Sixteenth Places	8 per region	• Regional first prize certificate • Cash prize of RMB 8,000 (pre-tax)
Regional Second Prize	Regional Seventeenth – Thirty Second Places	16 per region	Regional second prize certificate

5.2 Final Tournament

The Final Tournament Awards are as follows:

For teams ranked among the top 16 or higher in the Final Tournament (including the top 16), the prize money is divided into three independent components. Completing the requirements for each part will earn the corresponding portion of the prize. The sum of these awards constitutes the total prize amount.

- Part I: Competition results, accounting for 80%.
- Part II: Open source technology, accounting for 10%. Winning teams must follow the official guidelines to open source the robot data specified by the RMOC. The RMOC will grant additional Open Source Awards based on the extent of open source contributions.
- Part III: Legacy analysis, accounting for 10%. Winning teams must submit documentation related to personnel retention and technical knowledge accumulation as evidence of building team legacy, and open source the “Team Legacy Analysis” section in their Season Summary; the RMOC may award the “Torchbearer Award” based on the submitted materials.

Table 5-2 Final Tournament Awards

Awards	Rank	Quantity	Reward
National First Prize	Champion: 1st place	1	• Champion trophy • Champion medal • First prize certificate

 © 2026 DJI All Rights Reserved.

Awards	Rank	Quantity	Reward
			• Cash prize of RMB 150,000 (pre-tax)
	Second place: 2nd place	1	• Second place trophy • Second place medal • First prize certificate • Cash prize of RMB 150,000 (pre-tax)
	Third place: 3rd place	1	• Third place trophy • Third place medal • First prize certificate • Cash prize of RMB 150,000 (pre-tax)
	Fourth Place: 4th place	1	• Fourth place trophy • Fourth place medal • First prize certificate • Cash prize of RMB 150,000 (pre-tax)
	Fifth to sixteenth places	12	• First prize certificate • Cash prize of RMB 30,000 (pre-tax)
	Seventeenth to thirty second places	16	• Second prize certificate • Cash prize of RMB 10,000 (pre-tax)
National Second Prize	Teams that have advanced from the Regional Competition to the Wild Card Competition but have not advanced to the Final Tournament	12	• Second prize certificate • Cash prize of RMB 8,000 (pre-tax)
National Third Prize	Teams from Chinese mainland that have won the First Prize in the	4	Third prize certificate

Awards	Rank	Quantity	Reward
	Regional Competition but have not advanced to the Final Tournament		
	Seventeenth to thirty second place in each region	48	Third prize certificate

5.3 Open Source Award

Teams applying for the Open Source Award are required to make their core technologies or operation management approaches open-source during the 2027 season (May to August 2027) via RoboMaster forums and other channels, to advance the development of the RoboMaster competition and promote the culture and spirit of engineers.

There is no fixed number of winners for each open-source award. The RMOC will select winners based on the completeness and quality of the submitted open-source material proposals (including, but not limited to, software, hardware, and mechanical aspects). If there are no open-source projects of an outstanding nature, no winner will be announced for the Open Source Grand Prize. But if there is more than one outstanding open-source project, the Grand Prize may be awarded to multiple winners.

5.3.1 Award Structure

The Open Source Awards are as follows:

Table 5-3 Open Source Awards

Awards	Quantity	Reward
Grand Prize	Several winners	• Award certificate (for teams) • RMB 100,000 (pre-tax)
First Prize	Several winners	• Award certificate (for teams) • RMB 50,000 (pre-tax)
Second Prize	Several winners	• Award certificate (for teams)

 © 2026 DJI All Rights Reserved.

Awards	Quantity	Reward
		• Cash prize of RMB 15,000 - 30,000 (pre-tax), awarded based on an overall assessment of the open-source materials
Third Prize	Several winners	• Award certificate (for teams) • RMB 10,000 (pre-tax)
Outstanding Award	Several winners	• Award certificate (for teams) • Cash prize of RMB 2,000 - 5,000 (pre-tax), awarded based on an overall assessment of the open-source materials

5.3.2 Selection Criteria and Process

The RMOC will score the open source materials according to the following two criteria: basic format and content. For detailed selection criteria, please refer to the "RoboMaster University Series (RMU) Open Source Award Guidelines and Selection Criteria."

1. Teams from Mainland China should upload their open-source files to the forum and assign the appropriate content tags based on the open-source materials as follows: RM2026 + school name + team name + open-source direction + content description.
2. To apply, teams are required to complete a questionnaire (to be provided later).
3. The RMOC will assess and select the winners based on the questionnaires and the quality of the open-source content submitted by the teams.

5.4 Organization Award

5.4.1 Award Structure

The Organization Awards are as follows:

Table 5-4 Organization Awards

Awards	Quantity	Reward
Torchbearer Award	Several winners	• Award certificate (for teams) • Cash prize of RMB 5,000 (pre-tax)

© 2026 DJI All Rights Reserved

Awards	Quantity	Reward
Rookie Award	No more than 5 teams	● Award certificate (for teams) ● Cash prize of RMB 3,000 (pre-tax)
Breakthrough Award	No more than 5 teams	● Award certificate (for teams) ● Cash prize of RMB 2,000 (pre-tax)
Cost Control Award	No more than 5 teams	● Award certificate (for teams) ● Cash prize of RMB 1,000 - 3,000 (pre-tax), awarded based on an assessment of the submitted materials.
Top Tactician Award	No more than 5 teams	● Award certificate (for teams) ● Cash prize of RMB 1,000 - 3,000 (pre-tax), awarded based on an assessment of the submitted materials.
Best Season Schedule Award	No more than 10 teams	● Award certificate (for teams) ● Cash prize of RMB 1,000 - 5,000 (pre-tax), awarded based on an assessment of the submitted materials
Best Technical Report Award	No more than 5 teams	● Award certificate (for teams) ● Cash prize of RMB 1,000 - 5,000 (pre-tax), awarded based on an assessment of the submitted materials
Competitive Spirit Award	No more than 5 teams in the season	Award certificate (for teams)

 © 2026 DJI All Rights Reserved.

5.4.2 Selection Criteria and Process

Table 5-5 Organization Award Selection Criteria and Process

Awards	Selection Criteria	Selection Process
Torchbearer Award	● Demonstrates a strong awareness of team succession, capable of analyzing succession needs in terms of personnel, technology, and culture. They establish appropriate systems for team building, achieve tangible results, and enable the team to attain better competitive outcomes. ● Able to evaluate each season's circumstances, summarize effective strategies and experiences related to team legacy, and continuously iterate and improve. ● Able to summarize effective legacy measures or models that offer valuable insights and have a positive influence on other Teams.	Participants can apply either proactively or by invitation. After their materials are made publicly available on the forum, the RMOC will conduct a comprehensive evaluation based on the above criteria, taking into account the team's actual performance during the season and the submitted documentation
Rookie Award	● Participating teams that, including this season, have maintained stable results and shown improvement over a continuous period of two or three years. ● Teams that have not received the Rising Star Award.	● Teams showing greater improvement will be given priority for the award. ● Placement levels: 1. Not qualified for Regional Competition 2. Top 32 in Regional Competition

© 2026 DJI All Rights Reserved

Awards	Selection Criteria	Selection Process
		3. Top 16 in Regional Competition 4. Top 32 in Final Tournament 5. Top 4 in Regional Competition/Top 16 in Regional Competition 6. Top 8 in Final Tournament 7. Top 4 in Final Tournament
Breakthrough Award	Teams whose results once dropped by at least two tiers, then improved in each of the following two seasons compared with the previous season, and ultimately improved by no fewer than three tiers compared with the slump season, achieving a breakthrough in performance.	● Teams showing greater improvement will be given priority for the award. ● Placement levels: 1. Not qualified for Regional Competition 2. Top 32 in Regional Competition 3. Top 16 in Regional Competition 4. Top 32 in Final Tournament 5. Top 4 in Regional Competition/Top 16 in Regional Competition 6. Top 8 in Final Tournament 7. Top 4 in Final Tournament
Cost Control Award	● Cost data is clear and complete and can reflect the cost management or the result of cost control. ● Cost control schemes and methods are highly executable.	● After sharing their methods on the bbs.robomaster, teams are required to submit materials for appraisal, such as cost reports, etc. ● The RMOC will select the best candidates based on the cost-related assessment scores and submitted

 © 2026 DJI All Rights Reserved.

Awards	Selection Criteria	Selection Process
	● During the match preparation stage, actively share the effective and replicable cost control method and case publicly	materials from each stage of the Technical Assessment.
Top Tactician Award	● The team displays a good competitive spirit, with no serious violations of competition rules and proper standards of conduct. ● The team uses technical methods and tactical planning to reduce reliance on operators' repetitive training and on-the-spot performance. ● Teams use open-source and similar approaches to make tactical information more accessible, reducing the costs other participating teams incur when planning their tactics.	● The team submits application materials, such as tactics development process, documents on tactics-related actions (operator training), etc. ● The RMOC selects the best according to teams' performance and submitted materials.
Best Season Schedule Award	The team shares their 2027 Season Plan on the forum and gains high rankings in this section in the Technical Assessment among all teams that also share their plans.	● The team is required to complete a questionnaire to apply. ● The RMOC will collect the open source materials from the RoboMaster forum and select the winners based on the rankings. *Name the open-source post: "[Season Planning + School Name Team Name + RM2027 Season Planning Open-Source]"

© 2026 DJI All Rights Reserved

Awards	Selection Criteria	Selection Process
Best Technical Report Award	The team has gained a high rating for their Technical Proposal during the Final Robot Assessment, compiled a Technical Report based on the proposal, and shared the report on the forum at the end of the season, as per the RMOC's request.	At the end of the season, the RMOC will communicate with teams that have a highly rated Technical Proposal. Teams that improve their Proposal upon the request and make it openly available will be selected as candidates for the award. *Open source post should be titled: [Technical Report + School Name Team Name + RM2027 Technical Report Open Source]
Competitive Spirit Award	● The team displays a good competitive spirit (as reflected by their penalty records in official competitions), with no serious violations of competition rules and proper standards of conduct. ● The team is active in forums, WeChat groups, etc., and interacts well with the RMOC, volunteers, and other teams. ● The team is helpful, active, and an open source of information for others, enthusiastically sharing their experience and willing to provide resources to other teams.	● Selections to be made according to the feedback given by the staff of the RMOC, other teams, and volunteers of the competition. ● Teams with more positive feedback from the RMOC staff, other teams, and event volunteers will be given priority.

5.5 Robot Competition Award

5.5.1 Award Structure

- The number of awards for the Robotics Competition Award will be determined according to the selection criteria and the number of teams participating in the Regional Competition, based on the ratios listed in the table below. If the calculated result is not an integer, it will be rounded to the nearest whole number according to standard rounding rules.
- The number of awards for each category is calculated by multiplying the number of eligible teams by the award ratio, then rounding the result to the nearest integer according to standard rounding rules.

The Robot Competition Awards are as follows:

Table 5-6 Robot Combat Awards

Awards	Instruction
Robot Type	Heavy Engineer (attack direction, assembly direction), Infantry, Sentry, Drone System, Dart System, and Radar System
Quantity	• First Prize: approximately 15% • Second Prize: approximately 25% • Third Prize: Several • Honorable Mention: Several Note: The number of awards for each Level of each robot type will be adjusted based on the actual number of participating teams eligible for awards and the actual performance of each Robot in the competitions.
Reward	Award certificate (for teams and individuals, digital version)

© 2026 DJI All Rights Reserved

5.5.2 Selection Criteria and Process

Table 5-7 Selection Criteria and Process for Robots Combat Awards

Robot Type	Number of people	Selection Criteria	Selection Process
Heavy Engineer	Attack direction: 7	Average damage per second: total damage caused by the robot / total official competition duration of the robot's team	• The data is selected from the Regional Competition. • Based on each robot's actual performance in matches, specific data is selected for ranking. If multiple robots belong to the same class, only the robot with the best data is used for the ranking. Robots are evaluated according to a set ratio, and those that qualify for entry and meet the minimum award criteria must have server records of having participated in matches. • Due to technical reasons, when a robot inflicts projectile damage during a competition, there may be cases where the referee system cannot detect the exact source of that damage. In such cases, this untraced damage will be apportioned based on the proportion of this type of
	Assembly direction: 5	Average assembly score per round: total assembly score / total time spent completing all assemblies. Each Level 1 task is worth 1 point, each Level 2 task is worth 10 points, each Level 3 task is worth 20 points, and each Level 4 task is worth 100 points.	
Infantry	6 * 2	Average damage per second (total damage caused by the robot/total official competition duration of the robot's team) *Each team's Infantry with higher average damage over time are included in the ranking.	
Sentry	6	Average damage per second (total damage caused by the robot/total official competition duration of the robot's team)	
Drone System	7	Average damage per second (total damage caused by the robot/total official competition duration of the robot's team)	

 © 2026 DJI All Rights Reserved.

Robot Type	Number of people	Selection Criteria	Selection Process
Dart System	5	Average hits per round score (1 point for a hit on the Outpost, 5 points for a hit on a fixed Base target, 10 points for a hit on a random fixed Base target, 100 points for a hit on a randomly moving Base target, and 200 points for a hit on a terminal moving Base target)	projectile damage already caused by each robot within the same category of targets, and this allocation will be used as the final basis for awards.
Radar System	4	Average Radar performance score ((cumulative accurate marking time 1 + successful interpretation information wave difficulty level 200) / total official competition duration of the Radar-owning team)	

5.6 Annual Technical Breakthrough Award

The winners of the Annual Technical Breakthrough Awards must share their relevant robot types as open-source content in accordance with the rules and specifications. Otherwise, the payment of the cash prizes may be affected. The RMOC may grant the winner an additional Open Source Award depending on their open-source contribution (the prize money is whichever higher of the two awards).

5.6.1 Award Structure

Table 5-8 Annual Technical Breakthrough Awards

Awards	Quantity	Reward
First Prize	No more than 1 for each robot type	● Award certificate (for teams) ● Cash prize of RMB 15,000 (pre-tax)
Second Prize	No more than 2 for each robot type	● Award certificate (for teams) ● Cash prize of RMB 10,000 (pre-tax)
Third Prize	No more than 3 for each robot type	● Award certificate (for teams)

© 2026 DJI All Rights Reserved

Awards	Quantity	Reward
		• Cash prize of RMB 5,000 (pre-tax)
Excellence Prize	Several winners	Award certificate (for teams)

5.6.2 Selection Criteria and Process

The RMOC conducts a comprehensive evaluation based on multiple aspects, including the theoretical guidance and practical application in robot category design, competition performance, technical innovation, and breakthroughs, to select the first, second, and third prizes, as well as the excellence award.

5.7 Outstanding Contribution Award

The team of each Outstanding Contribution Award recipient demonstrates strong sportsmanship, with no serious violations of competition rules or standards of proper conduct.

- In RMUC, there will be no separate selection process for the Outstanding Captain (Team) and Outstanding Project Manager awards. Captains (Team) and project management staff may participate in the RM Award (Management) selection process, and final recipients will receive the corresponding personal electronic award certificate.
- Recipients of the Outstanding Operation Manager and Outstanding Team Advisor awards must publish a management/operations experience-sharing post on the RoboMaster forum within 2 weeks after the announcement of the selection results, and are obliged to participate in exchanges and surveys organized by the RMOC.

5.7.1 Award Structure

The Outstanding Contribution Awards are as follows:

Table 5-9 Outstanding Contribution Awards

Awards	Quantity	Reward
Outstanding Supervisor (Team)	No more than 10 teams in total for this season	• Award certificate (for individuals) • Cash prize of RMB 8,000 (pre-tax)
Outstanding Operation Manager	No more than 8 people in total for this season	• Award certificate (for teams) • Cash prize of RMB 5,000 (pre-tax)

 © 2026 DJI All Rights Reserved.

Awards	Quantity	Reward
Outstanding Team Advisor	No more than 8 people in total for this season	• Award certificate (for individuals) • Cash prize of RMB 3,000 (pre-tax)

5.7.2 Selection Criteria and Process

Table 5-10 Selection Criteria and Process for Outstanding Contribution Awards

Awards	Selection Criteria	Selection Method
Outstanding Supervisor (Team)	• The supervisor guides the team and instills team culture, displays a high sense of responsibility, takes care of each team member, promotes the growth and development of students in the field of competition, and is deeply revered by students. • Lead the team in sustained, healthy growth and progress, and guide team members in preserving knowledge, retaining key personnel, coordinating resources, and passing these practices on. • Improve or refine the team's management system for the current season, including but not limited to organizational structure, division of responsibilities, evaluation mechanisms, and development frameworks, and ensure it proves effective in practice to support the team's long-term, stable growth. • Discover outstanding talent within the team, provide members with guidance and support for further	• Applicants submit their materials via the awards portal (to be opened later), and the organizing committee will review all submissions and select the best candidates based on these materials. • In accordance with the RoboMaster University Series Advisor Talent Recommendation Policy, the Committee will grant an additional "Taoli Fenfang" (Excellence in Mentorship) bonus based on the recommendations provided: 1,000 RMB per successfully recommended individual (before tax).

© 2026 DJI All Rights Reserved

Awards	Selection Criteria	Selection Method
	study and employment, and actively support and participate in RoboMaster talent recommendation efforts in accordance with the relevant procedures.	
Outstanding Operation Manager	● Team building: Develop and continually refine a mature methodology for team operations to effectively enhance cohesion and management efficiency, and skillfully coordinate resources from all sides to ensure the team remains healthy and runs smoothly. ● Cultural heritage: A well-established cultural communication system is in place; archives of talent and technical achievements over the years have been thoroughly organized; the competition culture is deeply rooted in people's minds, and in official cultural surveys, our team members show a strong sense of cultural affinity with the competition. ● Promotional output: Communication content is highly creative and high quality, delivering impressive case studies that build strong visibility and positive influence both on campus and across the entire competition ecosystem. ● Business ecosystem: Closely aligns with official commercialization	Applicants submit their materials via the awards portal (to be opened later), and the organizing committee will review all submissions and select the best candidates based on these materials.

 © 2026 DJI All Rights Reserved.

Awards	Selection Criteria	Selection Method
	guidelines, submits high-quality partnership proposals, and successfully implements high-value, sustainable internal and external collaboration projects.	
Outstanding Team Advisor	● Able to contribute to the long-term continuity of the team by encouraging veteran members to provide essential support, and by offering practical, constructive advice and guidance on technical knowledge accumulation, systems and processes, talent development, and team culture. ● Able to document their experience in the form of technical documentation or process mechanisms for the team, helping the team accumulate technical know-how and build effective management systems, thereby supporting the team's long-term, stable development.	Applicants should complete the questionnaire to apply, and the organizing committee will select the best candidates based on the application forms.

5.8 RM Award

RM Award aims to celebrate the cultural spirit of outstanding young engineers, harness the power of role models, and encourage RoboMaster team members to live out the competition's values and actively expand their personal influence.

There is no fixed number of RM Awards, and the RMOC will assess candidates according to their submitted materials and interview performance.

© 2026 DJI All Rights Reserved

5.8.1 Award Structure

Table 5-11 RM Award Awards

Awards	Quantity	Reward
RM Award (Technical)	Several winners	● Award certificate (for individuals) ● Cash prize of RMB 10,000 (pre-tax) ● Invitation to a job interview
RM Award (Management)	Several winners	● Award certificate (for individuals) ● Cash prize of RMB 10,000 (pre-tax) ● Invitation to a job interview

5.8.2 Selection Criteria and Process

Table 5-12 RM Award Selection Criteria and Process

Awards	Selection Criteria	Selection Process
RM Award (Technical)	● Embody the ethos of the competition – "pushing the boundaries of knowledge through research and practice" – in daily R&D work. ● Show willingness and ability to learn, capable of exploring the principles of new areas of knowledge and applying them to real R&D tasks. ● Brace for challenges and rise to difficulties, make significant contribution to overcoming cutting-edge technical issues or bottlenecks, and inspire the rest of the team to strive for technical breakthroughs. ● Provide high-quality technical solutions for specific tasks or problems encountered during the competition.	● After the Regional Competition, candidates submit the application materials according to the requirements. ● Upon receipt of applications, the RMOC will screen the application materials. ● Among candidates who pass the preliminary screening, the RMOC will select the winners according to their interview performance. Note: Keep an eye out for subsequent announcements

 © 2026 DJI All Rights Reserved.

Awards	Selection Criteria	Selection Process
	● The core content of the application materials should demonstrate either a breakthrough or significant improvement achieved by the applicant for the first time during the competition compared to existing solutions, and the technical proposal must have been practically applied during the preparation or competition process.	concerning the full selection process of the RM Awards 2027.
RM Award (Management)	● Demonstrates strong management awareness, proactively establishes and refines internal management systems for personnel, schedule, and cost control, and leads the team to achieve its goals. ● Strong analytical skills, able to identify key issues and analyze root causes; capable of recognizing team risks and making critical decisions. ● Highly driven, sets high standards, actively tackles challenges, and is willing to break boundaries; leads by example and champions the competition's culture and spirit. ● The core content of the application materials should focus on the applicant's primary contributions and improvements since assuming the role.

Appendix: Safety Instructions

Every participant must fully understand and accept that safety is the most crucial prerequisite for the sustainable development of the RoboMaster Competitions. In order to protect the rights and interests of all team members and the event organizers, and according to relevant laws and regulations, all team members who have registered for the RoboMaster Competitions will be deemed to have acknowledged and agreed to abide by the following safety terms:

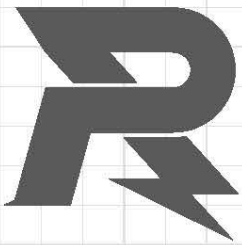

Every participant must fully understand and accept that safety is the most crucial prerequisite for the sustainable development of the RoboMaster Competitions. In order to protect the rights and interests of all team members and the event organizers, and according to relevant laws and regulations, all team members who have registered for the RoboMaster Competitions will be deemed to have acknowledged and agreed to abide by the following safety terms:

1. All team members who have registered to participate in the RoboMaster Competitions must confirm that they have full capacity for civil conduct and they are able to build and operate robots independently. They must also make sure that they have read in detail the Registration Guide and Competition Regulations among other important documents stating the rules and regulations of the competition, before starting to use any products by SZ DJI Technology Co., Ltd. to build robots.
2. During the competition, all team members should make sure that their actions including the creation, testing, and use of robots, will not cause any injury or damage to his or her teammates, members of the opposing teams, referees, competition staff, audience, equipment, or the Competition Area.
3. All teams must ensure that the structural design of their robots will not hinder safety inspection during the Pre-match Inspection and agree to fully cooperate with the Pre-match Inspection carried out by RoboMaster's organizers.
4. It is prohibited to use fuel-powered engines, explosives, hazardous chemical materials, and hydraulic or other propulsion methods that may cause pollution.
5. During any stage of development, preparation, and Participation, each Team Member must pay close attention to safety, comply with the Battery Safety Regulations of the RoboMaster University Series (RMU), and instructors are responsible for providing safety guidance and supervision.
6. The team must guarantee the safety of all the robots. This includes ensuring the Launching Mechanisms installed on the robots are safe and that they will not cause any harm (either directly or indirectly) to any team members, referees, staff, and audience.

 © 2026 DJI All Rights Reserved.

7. All teams shall take sufficient and necessary safety measures during the R&D, training, and competition periods regarding any hazardous situations that may occur. These include but are not limited to: preventing the control system from becoming unstable; anticipating every operation step prior to execution to avoid errors or collisions between team members or between robots and team members; prohibiting team members from engaging in solo training and making sure there are always personnel present to respond to any emergencies; wearing goggles; applying appropriate locks and adding safety features such as an emergency stop button to robot systems during commissioning.
8. In the event of accidents resulting from technical faults of robots, loss of control of Drones, or any other unexpected circumstances, all liability and losses shall be borne by the team causing the accident.
9. Each participating team must strictly abide by the local laws and regulations regarding flight control. The Drone of participating teams are allowed to fly only above certain restricted areas in competition venues. Therefore, no flight permit is required. To ensure the flight safety of a Drone, use a Drone Safety Rope to connect the Drone to a fixing pile on the ground. If an accident occurs, for example, if the Drone breaks away from the safety rope, the pilot must stop the motors and land the Drone as soon as possible. It is strictly prohibited to continue to fly in case of an accident. Participating teams are strictly prohibited from flying Drone outdoors.
10. The materials bought from or provided by the organizer SZ DJI Technology Co., Ltd., such as batteries and the Referee System, must be used in accordance with their instructions. SZ DJI Technology Co., Ltd. will not be held responsible for any injuries that arise from improper use of these materials. Teams will be held responsible for any injuries caused to their own members or any third party and for any property loss arising from creating and operating any robots.
11. All team members must strictly comply with the laws, regulations, and relevant provisions of their respective countries or regions, ensuring that robots are used solely for RoboMaster-related activities and competitions, refraining from illegal modifications to the robots, and not using them for any other unlawful purposes.
